segmenting a second coil into first and second series coupled coil portions that are wound in the third and fourth slot pairs, and with predetermined numbers of winding turns, that are offset by at least one slot position from the first and second slot pairs, respectively, such that a magnetic axis of the second coil is shifted angularly in a second direction relative to a center of the second coil that is opposite to a first direction; and electrically exciting the first and second coils such that the coils begin and complete commutation within coincident, overlapping commutation regions.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
